Notes

Wood is a living material; therefore, it can have slight color and dimension changes. The presence of any non-homogeneous color shades is not to be considered a defect but a quality.

TEAK: Teak wood comes from certified plantations, and it is an extremely durable material, resistant to weathering and acids, because of the presence of an oil-resin component that ensures exceptional durability. It features a wide range of colors that vary greatly, from pale yellow to bronze, with a reddish hue. Extended and continuous exposure to weathering agents changes its surface layer, leading to oxidation that gives it a gray-silver tone. A regular maintenance helps to preserve the wood's original color over time; any differences in color should be considered as qualities rather than defects, as they are a characteristic feature of Teak.

For the **OUTDOOR** version, we recommend placing the product on terraces or verandas to guarantee its durability over the years. It is recommended to use a "Protective Cover" to improve the longevity of the product. For further information about the dedicated maintenance, please refer to the technical sheet available in the "Materials" section on our website.

For the marble top version please specify the required finish in the order.

For marble finishing with opaque matt polyester finish, the "Marble" Maintenance Kit is included with the product.
